

CLEANING AND PROTECTION

Post-installation cleaning

The installer must also provide clean tiling for any acceptance tests.

The “post installation” cleaning serves to remove residual grout and is absolutely mandatory upon completion of the project. Non-slip surfaces: due to their particular, non-slip, rough or structured textures, are more difficult to clean.

Therefore, we recommend paying particular attention to cleaning methods, specifically by intervening rapidly.

Remember that the removal of the silicone must absolutely be done within 10 minutes of application so as to avoid hardening of the superficial part. To remove partially reticulated FILLER from tools and surfaces, one can use common solvents (ethyl acetate, petrol, toluene). After it is fully reticulated, the silicone can only be removed mechanically.

Protection

It is the installer's responsibility to protect the finished, clean tiling. The protection of the ceramic covering for the period between the end of the installation and delivery to the client is all the more important when the environment in question will be subjected to significant foot traffic from other building operators (painters, electricians, bricklayers, etc..). The protection of the slabs is carried out by applying suitable protective materials.
